Executive Summary

1. Industry and Competition Analysis (p. 4)
 - Main Competitors:
 - Duolingo (popular, accessible, cost-effective)
 - Rosetta Stone (strong brand recognition, immersive)
 - Busuu (certifications, community learning)
 - Babbel (conversational and structured learning)
 - EnglishHelper
 - Strengths: AI-powered personalized learning, strong academic foundation, subject-based learning (SBL), data privacy, proven success with institutional users.
 - Weaknesses: low brand awareness, limited engagement features, weak direct-to-consumer appeal, reliance on legacy product (ReadToMe).
 - Opportunities: growing global demand for English, expansion into test prep market, partnerships with institutions, underserved regions.
 - Threats: strong competition, cheaper alternatives, infrastructure limitations in target markets
 - Customer/partner interviews:
 - 100% of surveyed users were students
 - 61.5% struggle with speaking confidence and anxiety
 - Most users currently use Duolingo or YouTube
 - Strong interest in AI-based, private speaking practice
2. New Market Selection and Analysis (p. 9)
 - Recommended market:
 - Students and young professionals (ages 16–30) preparing for English proficiency exams (IELTS, TOEFL, PTE)
3. Product Strategy (p. 10)
 - Recommended features:
 - AI-powered speaking simulations and pronunciation feedback
 - Exam-style practice tests and mock interviews
 - Personalized learning pathways
 - Gamification (streaks, rewards, challenges)
 - Micro-learning (short daily lessons)
4. Pricing Strategy(p.12)
 - Freemium model:
 - Free plan with limited access and ads
 - Premium plans:
 - Academic Pro: ~\$9.99/month
 - Career Expert: ~\$14.99/month
5. HR and Implementation (p. 14)
 - Required hires:
 - AI engineers and data scientists
 - Language assessment experts (IELTS, TOEFL, PTE)

- Content developers for test prep materials
- Organizational changes:
 - Cross-functional collaboration between tech, content, and marketing teams
 - Expansion of customer support and academic services
- 6. Promotion Channels (p. 17)
 - LinkedIn: Target professionals and students with career-focused content
 - YouTube: Tutorials, short-form videos, and learning demonstrations
 - SEO/Search Marketing: Capture users actively searching for test prep tools
 - Community platforms: Discord, WhatsApp, and university groups for organic growth
- 7. Message (p. 17)
 - Core value proposition:
 - Confidence-building, stress-free English learning
 - Psychological comfort (no judgment learning)
 - Personalized, interest-based content
 - Flexible, mobile learning
- 8. Promotional Materials (p. 19)
 - Social media ads showing transformation (low confidence → fluent speaker)
 - Email campaigns targeting corporate clients and institutions
 - Short-form video content demonstrating real user progress
- 9. In-App Monetization Strategy (p. 20)
 - Hybrid model: free version with ads + premium ad-free version
 - Non-intrusive ads between lessons
 - Target advertisers: education, career development, and skill-building platforms

Section 1: Market Analysis

Key Recommendations:

- Focus on underserved global markets
- Target students and young professionals
- Leverage AI personalization advantage
- Improve accessibility and engagement

Industry and Competition Analysis

EnglishHelper competes in the global EdTech and AI-driven language learning market by delivering English acquisition solutions which include digital literacy and English language learning platforms. The company competes directly with language-learning applications that target individual users through their accessible and engaging learning content, which includes Duolingo, Babbel, Rosetta Stone, and Busuu. The market for language development and text comprehension solutions faces competition from AI-based writing and analysis platforms, which include Grammarly and QuillBot. Educational platforms like Coursera, Khan Academy, and Google Classroom create indirect competition with EnglishHelper because they offer digital learning systems and content delivery methods which compete with EnglishHelper's Subject-Based Learning (SBL) system.

Competitors in the EdTech and language-learning space offer user engagement features which EnglishHelper fails to implement. The system includes gamification elements which provide points, streaks, and leaderboards together with social learning environments and conversational AI tools which replicate real-time dialogue practice. The majority of platforms offer both certifications and credentials while creating mobile-first experiences, which are designed to maximize daily user engagement ("EdTech in 10 charts," 2025). EnglishHelper establishes its unique identity through its academic design framework targeting educational institutions. The products deliver basic literacy education through the four fundamental skills of listening, speaking, reading, and writing, which are supported by an AI system that provides clear, trustworthy, and accurate output while maintaining data security. The platform supports various content types and educational programs, enabling its implementation across different educational systems while providing educators with tools to monitor student progress through its advanced analytics system. The Subject-Based Learning solution combines English language instruction with academic courses through its specialized learning framework which uses neuroscience to apply cognitive load management techniques and spaced repetition methods together with multisensory educational approaches. EnglishHelper should add features which improve user engagement and system capacity through gamification elements, conversational AI tutors, and social learning capabilities to enhance its market position. The organization will enhance its market position through mobile optimization, certification programs, and offline access for users with limited internet access and job-oriented English skills training which includes interview preparation and workplace communication skills.

Business Models:

The Foreign Service Institute (FSI) makes use of this great hybrid product of SaaS, licensing, and consulting. Basically, they operate based on subscriptions: the partner schools pay an annual fee in return for a complete digital transformation platform. Inside that platform, there is curriculum, teacher training, marketing help, and even AI tools to keep quality up to snuff. The subscription is used to pay for steady income for FSI and providing schools with regular updates and support over time. Besides the SaaS aspect, FSI also has a sense of licensing/franchise to allow schools to adopt the Finnish school method within its

network. Partner schools tap into a system that's internationally known for quality, and they become a part of a worldwide brand. It is not a heavy franchise with strict rules on ownership, but a method of imposing standard procedures, branding and guidance - like a light franchise. FSI is like a consulting firm as well, helping the schools to transform because it is more than just content. They coach schools around how to rebrand, increase the quality of teaching and improve their game overall. This includes hands-on implementation assistance, continuous teacher training and growth, and market positioning strategies. The consulting edge especially distinguished FSI from the normal curriculum vendor. Lastly, FSI is a hybrid subscription-service that combines the help of online tools as well as real-life help. Schools receive digital knowledge plus a designated implementation professional being held to progress and providing ongoing support. That combination increases the value and means that users can stay loyal to schools, and once a user is in, it is difficult to switch.

Products and Services offered:

Competitor	Core Product/Service	Key Features	Unique Strength
Speak	AI language tutor	Personalized video calls, conversation scenarios, pronunciation scoring, progress tracking	Strong focus on speaking and real-time AI interaction
Duolingo	Gamified language learning app	Reading, writing, listening, speaking lessons, rewards, streaks, progress tracking	High engagement through gamification and simplicity
Babbel	Conversational learning platform	Pronunciation recognition, grammar correction, live virtual classes	Structured conversational learning with real teachers
Rosetta Stone	Immersive language learning	Image-based learning, audio lessons, speech recognition, mobile access	No-translation immersive learning approach
Busuu	Community-based learning app	Feedback from native speakers, grammar lessons, study plans, certificates	Social learning and real human feedback

Models based on individual subscriptions:

The most popular apps, like Babbel and Rosetta Stone, work on a subscription model. You usually pay a fee of around \$10 to \$15 per month. Many companies will give you a significant discount if an annual plan is chosen. This is positive for companies because they get money immediately. It also helps them build relationships with users. It makes users more valuable to the company over time while they use the service. The subscription model is highly favorable for companies like Babbel and Rosetta Stone because it helps them make money and keeps users happy at the same time.

- Freemium model:

The freemium model is what companies like Duolingo use. They give users the product for free when they first start. This helps them get a large number of users quickly and

increase their user base. The freemium model is a way for them to make money in two ways. First, they show ads to people who use the free version of the product. They also offer a paid subscription to the freemium model. The paid subscription gives users more options they can do with the product, and it takes away some limitations. For example, the app can be used without internet access, or it can be used without seeing any ads with the freemium model. The freemium model is used by companies like Duolingo to make money from the product.

- Social Model at Busuu:

The Busuu platform operates on a subscription model. This means that users pay to use it. The Busuu platform also has a feature that is a significant advantage: Busuu users can ask native speakers of a given language to review their work. This makes the learning experience more realistic. Users can also access some features on Busuu for free. If they want to receive a certificate of course completion or use more advanced features, such as detailed grammar lessons, it costs between \$10 and \$14 per month. Busuu works by encouraging users to converse with one another, which helps keep them engaged. At the same time, this helps Busuu spend less money on running the platform. People using Busuu help check whether someone is using the language correctly. This keeps users happy and makes them want to stay on Busuu.

- Specialized AI subscriptions:

Some companies that use technology like ELSA Speak make money from specific features that use Artificial Intelligence. The prices of these companies are similar to the prices of apps, but they talk about how their technology can be used by many people easily. When people use these platforms, they pay to use tools that check their pronunciation right away. This helps companies save money on costs and gives people good support to learn new things. Companies like ELSA Speak can do this because Artificial Intelligence subscriptions are what they focus on.

EnglishHelper SWOT Analysis

Strengths • AI Technology • App Features & Dashboard • Multi-Sensory Approach	Weaknesses • Heavy Reliance on ReadToMe • Brand Recognition • Not as Fun as Competitors
Opportunities • Global Market Expansion • Rise of AI • Partnerships with Schools • Expand to Other Subjects	Threats • Low Brand Recognition • Oversaturated Market • Replaced by AI

Though there are many companies in the language-learning space, EnglishHelper stands out in various ways. Their biggest advantage comes from their AI technology, which adapts to each user and tailors lessons specifically to them, helping them retain information and learn better (EnglishHelper, 2026). The platform contains many great features, including the dashboard, which allows educators and users to monitor and track their progress (EnglishHelper, 2026). Their approach to learning is very effective at helping users retain content through a multi-sensory, neuroscience-based approach (EnglishHelper, 2026). However, there are several things EnglishHelper does not do as well in comparison to its competitors. In terms of constantly innovating and adapting to ever-changing consumer needs, it has been slower, seeming to hit a plateau and relying heavily on its legacy product, ReadToMe (EnglishHelper, 2026). Their perceived brand value and recognition are much lower than those of their competitors, such as Duolingo, which is a well-known company globally (Guo, 2025). Duolingo also surpasses EnglishHelper in keeping users engaged and motivated through its engagement features and in making learning fun (Guo, 2025). This contrasts with their competitors who are easily accessible to users through their various offerings, such as free trials and subscription tiers (Nushi & Eqbali, n.d.).

EnglishHelpers' strengths and weaknesses offer many opportunities for companies to improve and scale much further; however, they also expose companies to threats from competitors. Research indicates a growing need for education technology platforms, suggesting significant potential for the company to expand further and become a more well-known name in the global market (Guo, 2025). The rise of AI in recent years has created a significant opportunity for the company to leverage it in language learning to attract customers and adapt to the times, as the world increasingly leans on AI, especially everyday people (Guo, 2025). Collaboration could be another great way to help the company expand and scale even further when partnering with educational institutions and corporations (EnglishHelper, 2026). The company also has the option to expand to other areas of the education market by getting into the various educational subjects and concepts besides language learning, like Mathematics or Science, as their competitors are not as easily able to do so, giving them an edge and helping to expand their customer base and be able to reach even more customers (EnglishHelper, 2026). The biggest threat to EnglishHelper is that, compared to its competitors, it has a much smaller customer base and brand recognition, making it much harder to compete with larger brands like Duolingo, which has more

resources and can spend less on marketing (Guo, 2025). Though AI can be a benefit, it can also be a detriment, as it can eventually render language-learning platforms obsolete (Guo, 2025). The language learning market is currently oversaturated, making it all the more important and pivotal that EnglishHelper distinguishes itself from the competition (Guo, 2025). If this continues, it will be harder for EnglishHelper to get consumers to switch from platforms like Duolingo, which make learning fun and increase retention in their application (Guo, 2025).

Primary Market Research Analysis

- Appendix A: Survey Questions
- To validate our strategy, we conducted a target audience survey among students and young professionals. See Appendix B for detailed survey findings

Target Audience Profile and Identification of Language Barriers:

The results of a survey conducted among Polish students clearly indicate that the greatest difficulty in learning English is not limited access to educational materials, but rather barriers related to oral communication—primarily a fear of speaking and difficulties with pronunciation. All respondents from the academic community emphasized the stress associated with speaking in front of others, which significantly slows down the learning process and limits their language use.

An analysis of current learning methods shows that students most often rely on passive forms of knowledge acquisition, such as watching videos (e.g., on YouTube). Although this method supports the development of listening comprehension skills, it does not sufficiently translate into the development of communication skills. This points to a clear market gap that a solution like EnglishHelper can fill. The use of an AI assistant (RCA) allows users to practice pronunciation in a safe, controlled environment, eliminating stress and encouraging active language use.

Product Adaptability and Functional Preferences:

The survey results indicate that most respondents are willing to use the app, provided that the learning process is tailored to their individual interests, such as technology, sports, or business. This demonstrates the significant potential of the SBL (subject-based learning) module, which can serve as a key motivational factor by moving away from traditional, cookie-cutter teaching methods in favor of a more practical and engaging approach.

Another important aspect for students is the solution's mobility. The ability to learn anywhere and anytime aligns with their dynamic lifestyle and need for flexibility. Additionally, the analysis results show that gamification elements, such as reward systems and leaderboards, are particularly valued. These mechanisms are seen as a significant factor in increasing motivation and engagement in regular learning.

Price Analysis and Market Recommendation Strategy

Students have varying opinions about money. This suggests that EnglishHelper should adopt a flexible approach to payments. Most students consider a monthly fee of \$8 to \$15 to be acceptable. They are willing to pay for quality services, but they don't want to see

ads. On the other hand, many students prefer free solutions. This may mean that it's worth introducing a freemium model. In this model, users can use basic features for free and then opt for the paid version.

The good news for the app is that students are eager to recommend it. There is, however, one condition: price and availability. This may mean that a referral-based marketing strategy, with a special offer for students, could generate rapid growth in interest and increase brand recognition.

Interviews with University administrators

- From a school's perspective, EnglishHelper is very helpful. It can assist students with various language skills. Teachers do not have to waste time correcting mistakes and can focus on more important things.
- Modern technologies are very important for schools. They can attract students from other countries by causing the school to look more modern and attractive.

Using EnglishHelper:

- EnglishHelper can be used both in and outside of school. Students can work independently on pronunciation and analyzing materials. Then, at school, they can do exercises, discuss topics, or work in groups.
- EnglishHelper is also very helpful outside of school. Students can use it at any time. This is very useful when preparing for exams or defending a thesis in English. In those situations, it is important to speak fluently and accurately.

New Market Analysis

Regarding the company's market, EnglishHelper identified its target segment as students from kindergarten through high school with relatively low English literacy in places in or like India and sub-Saharan Africa. The X-Culture case brief on EnglishHelper noted that many young professionals and students in India are reading below their grade level, and this is a broader global issue. Since English is widely seen as a symbol and an essential tool for social and economic progress, there is a strong demand for English instruction in underserved areas worldwide. Additionally, because EnglishHelper's platform integrates well with institutions and programs, it should focus on this segment. This is supported by evidence of EnglishHelper's success in many schools and among numerous students, reinforcing that their best strategy is to build relationships and partnerships with institutions, schools, and programs in these underserved regions.

Market Segment

Factor	Key Characteristics	Implications for EnglishHelper
Demographic	Students & young professionals (16–30) from non-English speaking countries preparing for TOEFL, IELTS, PTE	Target tech-savvy users with AI-based, mobile-first platform

Cultural	Focus on career growth, high test scores, and efficiency; prefer structured and exam-focused learning	Provide structured lessons, mock exams, and score prediction tools
Legal	Must comply with GDPR, India Data Protection Act, and other local laws; copyright restrictions on test materials	Ensure data privacy compliance and develop original test preparation content

Section 2: Product, Sales, Operations

Key Recommendations:

- AI-powered English proficiency test preparation
- Add interactive learning features to improve engagement
- Multiple subscription plans and freemium pricing
- Create personalized learning programs

Product

Product	Core Function	Strengths	Key Gaps	Recommended Improvements
ReadToMe	Multi-sensory reading software Designed for schools	Reached over 25 million learners from 9 different countries. Adapts to learning levels.	Users struggle to stay engaged and motivated to keep learning as there is no other incentive or feedback. Speaking and pronunciation practice. Lacks Direct-to-consumer appeal for non-students Lack of personalization	Add rewards and streaks to improve engagement AI-powered conversation tools to improve speaking and pronunciation Creating goals for career and real-world needs
RCA	AI model to help learners understand	Personalized services for learners through a placement test.	Lack of engagement Deeper real-world applications	Include gamification features

	core English skills	Specified educational curriculum. Real time feedback	Tracking progress for businesses and test preparation	AI-driven simulations for practical speaking Personalized goal tracking Mobile version
SBL	AI product designed for multiple subjects	Multipurpose tools enhance educational value Summary and key phrase features	Lacks customization for students to access different subject levels Fails to implement application-based learning	Content difficulty adjustment Interactive problem-solving Scenario-based exercises Peer group activities

Product Recommendations

Recommendations for new products and features that EnglishHelper could develop to improve its competitive value for the consumer market include learning platforms designed mainly for students and young professionals who are trying to pass English proficiency exams, such as TOEFL, IELTS, and PTE (IELTS Expert, 2021). EnglishHelper could develop an AI-based speaking coach system that produces instant assessment results to evaluate grammar, pronunciation, and fluency. The product can create test conditions that will examine users' speech and conduct interviews. To help keep users engaged and motivated with the new products, EnglishHelper can design daily challenges and streaks to earn rewards and badges.

The new product tools will include test preparation programs for any subject the student/users need help with. Within these programs, an AI coach will be present whenever the users need assistance, along with personalized study guides and practice exams that the users can design with assistance from the AI coach. These programs will also display progress-tracking, so users can gauge where they are standing in preparation for their real exam. There are also extra perks such as resume building for another language and certifications that users can show on their resumes or platforms.

Pricing

Given the unique characteristics of Polish universities and the findings of the research, the freemium model appears to be the best way to monetize the SBL product. Under this model, users can access basic materials for free, which helps quickly attract new users and build a sufficient user base.

Revenue will come from the fact that some users will begin paying for access to specialized materials as part of premium packages. These packages will offer access to advanced English language materials in specific fields, such as computer science, medicine or business, as well as full integration with an AI-powered pronunciation assistant.

Recommended Pricing Strategy

We want our offerings to be tailored to our users' needs and budgets. Our research shows that 40% of users prefer the free option. Moreover, more than half are willing to pay for additional features.

We offer three subscription plans:

1. Student Basic – this plan is free. It provides access to three articles per week but includes ads. It is a great way for new users to try out our platform at no cost.
2. Academic Pro—costs \$9.99 per month. It offers full access to all modules and unlimited use of the pronunciation assistant. The price is affordable, so it should be suitable for many people.
3. Career Expert - The monthly cost is \$14.99. This is the most comprehensive package, offering features tailored to individual users' needs. They can also upload their materials for analysis by artificial intelligence.

The strategy calls for promoting annual subscriptions with a 20% discount—\$80 per year instead of \$120—which will ensure more stable revenue and reduce user churn. An additional option could be a micropayment system that would allow users of the free version to access specialized features on a one-time basis without having to purchase a full subscription.

The value of the SBL product for students lies not only in learning vocabulary, but also in saving time and providing real help in building a career path. The price of \$10–15 per

month is presented as an investment in a personal mentor, which is significantly cheaper than traditional tutoring, which costs around \$20–30 per hour. This makes EnglishHelper a cost-effective solution that is also perceived as modern and prestigious.

Engagement & Retention

To enhance learner engagement and retention, EnglishHelper should adopt a combination of proven and emerging methods, including game-based features, peer interaction, social learning, and competitive elements. Reward-based systems such as points, badges, and streaks can encourage consistent practice by motivating users through visible progress. These features are particularly effective for younger learners and beginners. However, to sustain long-term engagement, these incentives must be connected to meaningful learning goals rather than short-term rewards alone.

Peer interaction and social learning also play a critical role in improving engagement and learning outcomes. Platforms such as Busuu demonstrate the value of community-based learning by allowing users to receive feedback from native speakers and collaborate with others. Incorporating similar features into EnglishHelper would help users build confidence in real-world communication. Additionally, competitive elements such as leaderboards and challenges can increase participation, especially in classroom settings, while professional users may prefer personalized progress tracking over competition.

To best understand how EnglishHelper can improve its engagement, it was imperative to review three of its competitors: Babbel, Duolingo, and Rosetta Stone, which already have proven success in terms of user engagement (Amplitude, 2022). Babbel has been very successful with its data-driven approach to language learning, using real-time data to continuously improve and adapt its apps for users, ensuring its product stays relevant and up to date (Amplitude, 2022). To keep users engaged and ensure their content stays up to date, they use a short-form approach, which is fitting for today's climate, especially given younger generations' shorter attention spans (Amplitude, 2022). They can also build engagement by having their content and lessons created by real language experts rather than relying on technology (Amplitude, 2022). Duolingo's success comes from making learning a game for users; it doesn't feel boring or redundant, helping keep them entertained while learning, and this increases its ability to draw users in (Guo, 2025). To ensure the content is relevant to users and helps them retain information, they use data and A/B testing, ensuring the product remains effective. They have retained strong user engagement through their freemium model (Guo, 2025). Rosetta Stone was able to perfect the use of images, text, and sound as an effective method of learning, helping them to keep users interested and paying attention (Prasetyo et al., 2015). The way they formatted their platform to keep users engaged makes it so that the user is more involved by completing various tasks and activities (Prasetyo et al., 2015). This is a way of giving users a more hands-on learning experience as they are learning by actually getting involved and not simply sitting there looking at a computer screen (Prasetyo et al., 2015). The way they set up their platform also helps to keep users engaged and motivated because as they complete the tasks and activities, they are given visual feedback in real time, helping the user to monitor and track their performance (Prasetyo et al., 2015).

These engagement strategies are highly scalable, as AI-driven personalization, automated feedback systems, and digital reward structures can support large numbers of users at a relatively low cost. Additionally, community features reduce reliance on instructors while still maintaining interaction and feedback. These methods are effective across multiple use cases, including classroom learning, independent exam preparation, workplace communication, and ongoing skill development.

To retain users beyond their formal relationship with institutions, EnglishHelper must position itself as a lifelong learning platform. Many learners seek continued access to tools that support career advancement and real-world communication after graduation. Retention depends on the perceived ongoing value of the platform, which can be strengthened by offering advanced modules, practical applications such as business communication and interview preparation, and recognized certifications that provide tangible outcomes. Community engagement can also encourage long-term usage by creating a sense of belonging, while flexible pricing models, such as freemium access and tiered subscriptions, can address pricing sensitivity.

HR and Personnel Considerations

EnglishHelper needs to develop its human resource capabilities through specialized cross-functional teams which satisfy product requirements and technology requirements and customer requirements to achieve successful expansion into the English proficiency test preparation market.

Key Roles and Competencies:

EnglishHelper needs to hire and train personnel across three essential fields:

- AI engineers and data scientists create automated scoring systems and personalization algorithms and predictive performance analytics.
- Language assessment experts and test-prep specialists who possess IELTS, TOEFL, and PTE expertise will create practice materials that meet both compliance standards and accuracy requirements.
- Content developers and instructional designers will develop both exam preparation materials and real-life application learning paths.

These roles maintain technical accuracy and educational credibility, which results in increased user trust and improved learning results.

Organizational Structure and Collaboration

EnglishHelper needs to implement a cross-functional team structure which supports scalability through its integration of:

- Product development
- AI/engineering
- Content creation marketing

This structure enables organizations to develop innovations at a faster pace while ensuring that product features meet both user requirements and market demands. The teams need to work together closely because their collaboration establishes a unified user experience which preserves platform consistency.

Scaling and Talent Strategy

The HR department needs to provide assistance with immediate operational needs and future organizational growth requirements.

- Recruit outside specialists who will create test preparation materials and artificial intelligence functions within a short time frame.
- Develop internal training programs that will help current staff members become experts while decreasing the need for outside expert assistance.

The company will achieve quick market entry through this method while establishing a pathway for sustainable development.

Employee Experience and Retention

New product lines and technology implementations will create workforce changes. The organization provides employees with chances to develop additional skills which they can use to advance their careers, yet they must deal with transition obstacles.

EnglishHelper should manage this situation by:

- Establishing organized educational training for all new technological systems and operational equipment.
- Developing a performance evaluation system which connects user results to workplace performance assessments.
- Achieving business objectives through performance assessment methods, which will ensure employee dedication to their work.

Strategic Implications

The HR strategy helps EnglishHelper to establish its competitive market advantage. The company can develop a unique high-quality product through its investment in artificial intelligence experts, educational specialists, and interdepartmental teamwork. The current system enables EnglishHelper to operate advanced technology while maintaining its ability to expand work efficiency and achieve its future development goals.

Section 3: Marketing

Key Recommendations:

- Redesign digital platforms to attract individual users
- Use LinkedIn, YouTube, and SEO promotion channels
- Focus messaging on confidence and stress-free learning
- Implement low-cost, content-driven marketing strategies

Analysis of Current Market Assets

1. Website (<https://www.englishhelper.com>)

The website has a very official and corporate look. It focuses on social services and solutions for schools, which may deter individual users, such as students. It looks a bit outdated compared to modern educational apps.

Suggestions for improvement:

- Clear segmentation of users (B2C): The homepage should clearly distinguish between offerings for institutions (“For Schools and Governments”) and for individual customers (“For You”). This will help students immediately understand how RCA and SBL can be useful to them in their daily lives.
- Modern design and user experience: the website should have a modern look and a simple design, similar to that of other modern apps. It should feature an interactive voice assistant demo, allowing users to see how the artificial intelligence works before they decide to download the app.
- Building credibility (Social Proof): It would be a good idea to include a section on the website featuring reviews from students and professionals from various countries, not just India. This will help demonstrate that the brand operates globally.

2. LinkedIn ([linkedin.com/company/englishhelper-education](https://www.linkedin.com/company/englishhelper-education))

The profile is managed in a very formal manner, primarily posting information about corporate achievements, partnerships, and corporate social responsibility. It lacks educational content that might interest working professionals.

Suggestions for improvement:

- Expertise: Publishing articles on how artificial intelligence is transforming language learning. This will attract professionals who follow technology trends.
- SBL Module Showcase: Highlighting specific examples of industry-specific texts, such as “How to Talk About Technology in English.” LinkedIn is the perfect place to promote business language learning.
- Employees as Ambassadors: Highlighting the faces of the engineers and linguists behind the technology, which builds trust in the quality of the algorithms.

3. YouTube ([youtube.com/@EnglishHelperEH](https://www.youtube.com/@EnglishHelperEH))

The channel focuses mainly on tutorials and event coverage. The videos are quite technical and may not be very interesting to a younger audience. There are no short, dynamic videos here, such as Shorts, which are currently helping to build a large outreach.

Suggestions for improvement:

- The “Before and After” series: Creating short videos that highlight users’ real-life progress—from initial difficulties and uncertainty in speaking to fluent and accurate

pronunciation thanks to RCA. It's the perfect solution for people who suffer from "tongue-tie."

- Using YouTube Shorts: We create 15-second videos with tips on how to pronounce difficult English words correctly. This format is perfectly suited to the way students consume content—quickly, concisely, and on mobile devices.
- Thematic webinars: Live sessions during which an expert demonstrates, in a practical way, how to read and analyze content from the SBL module—such as articles from the Harvard Business Review. This allows users to develop both their language skills and industry knowledge at the same time, which significantly enhances the value of the learning experience.

EnglishHelper is currently aimed at large institutions rather than individual users. The website is too formal and lacks a quick demo that would allow users to quickly understand what EnglishHelper offers. The LinkedIn profile looks like a bulletin board rather than a tool for career development, and the YouTube channel features boring instructional videos instead of short, dynamic clips that might engage users.

To convince students to use EnglishHelper, the company needs to change its approach. Instead of talking about its mission, it should demonstrate the real benefits its product can provide. For example, how EnglishHelper can help students master the language quickly and stress-free before an exam or a job. The company should become more user-friendly and less bureaucratic to attract more users.

Promotion Channels

The most effective methods for promoting the product in the proposed new market for student's and professionals preparing for English exams, would be through platforms such as LinkedIn and YouTube. These platforms are digital which makes it easily accessible for consumers to view, as this is the most common and rewarding way for promoting products currently. EnglishHelper will be able to share content-driven strategies that align with the target audience; these strategies will be educational content such as exam tips and product tutorials to show a glimpse of all the new features the product offers. LinkedIn and YouTube are also known for professional and educational content, as career professionals post and share valuable resources on LinkedIn very often, and YouTube is used for educational learning in schools, providing videos for learning, demonstrations and more. These two platforms are perfectly aligned with generating conversions as they are credible and B2B targeting, such as schools, companies, and English learning testing sites like SLB (YEC Council Post, 2023). Additionally, another important part to promoting the product is search-based marketing (SEO), since many consumers planning to take an English proficiency test would search for test preparation courses. Additionally, partnering with international content creators could also help promote the product to the target audience through a more relatable and authentic way, creating an increased rate of adoption.

Low-cost or free promotional channels to reach the target audience should be focused on the people who are actively seeking English learning help. Promotional channels such as university groups, online blogs, and platforms like Discord and WhatsApp would be more effective with conversions as these channels provided more in-depth descriptions and learning of the product. Users are also able to share advice and testimonials about the

product, creating a community where consumers from all over the world can connect through one common product by EnglishHelper. In addition, YouTube and LinkedIn will also generate organic content and traffic to the target audience at little to no cost. These platforms can provide links to the website where the consumers can try the free trials of resources as a taste of what they could receive, attracting potential users and encouraging word-of-mouth promotion.

Message

The best way to convince university administrators to implement EnglishHelper is to present it as a means of levelling the playing field in education and as a modern addition to the academic curriculum. They should rely on concrete data that demonstrates how well it works. EnglishHelper, powered by artificial intelligence, allows each student to improve their pronunciation individually—something that is difficult to achieve in a group of a dozen or more students with just one instructor. For universities, the main benefit is smart teaching support. This can reduce the number of students who drop out of language classes due to stress. This, in turn, leads to better results and highlights the university as a modern and innovative institution.

Marketing campaign

The main idea behind the marketing campaign focuses on how to overcome language-related challenges. Instead of traditional teaching methods, EnglishHelper is presented as a place where you can practice without fear. This approach directly addresses the fear of judgment, which is common among all study participants. Slogans such as “Practice with AI without an audience” help create an image of a tool that supports learning and allows users to make mistakes and learn at their own pace, without stress or pressure.

Key campaign slogans

- “Overcome your mental block before it overcomes you.” — This slogan creates a sense of urgency. It emphasizes that learning a language is important before job hunting becomes more difficult.
- “Practice with AI without an audience.” — This slogan sets our product apart. It ensures that users can learn without fear of making mistakes. Their slip-ups remain between them and the system.

To effectively reach students and young professionals, the campaign should clearly highlight three key points:

- Psychological comfort: a user's mistakes are their secret – This means there is no judgment or criticism here. This allows users to learn without stress and feel at ease.
- Content tailored to individuals: a user can learn what truly interests them. Instead of generic materials, users receive content aligned with their interests, such as technology, sports, or business.
- Full mobility: Learning always at the user's fingertips. With the app, users can improve their language skills anywhere and anytime, for example, on the way to school, between classes, or during breaks.

Elements of the visual campaign

- POV (Point of View) videos:
Short TikTok videos that highlight a stark contrast—on one hand, stressful situations in language classes, and on the other, relaxing exercises at home with EnglishHelper.
- Challenges:
The “7 Days Without Blockages” campaign encourages daily exposure to English through reading texts related to personal interests. The goal is to quickly notice improvements in speaking and a boost in self-confidence.
- Collaboration with teachers and experts:
Working with influencers who specialize in language learning and professional development, who demonstrate how to use EnglishHelper in practice. For example, to prepare for job interviews or public speaking engagements without stress.

Promotional materials

Mockup 1: Social Media Ad

This ad is for social media platforms such as Instagram and LinkedIn and aims to reach young professionals and people looking for jobs. The ad uses the transformation concept, which is more relatable. The image shows a professional working in a meeting. The first frame captures the individual looking hesitant and unsure while speaking in English. The second frame captures the same individual speaking in English and confidently giving a presentation. The ad aims to convey the message that the individual has been transformed from being apologetic and unsure about their English to being in control and able to lead the meeting. The ad aims to highlight the value of the service to the clients and create the value of the ad by giving users free assessment sessions. This mockup is persuasive because it captures the

struggle of many people and the transformation that occurs.

Mockup 2: Email Draft for Event Organizers and Corporate Clients

This draft is used to partner with corporate clients and event organizers. He maintains professionalism and explains how The English Helper is beneficial to them. He says, 'Level Up Your Team's Communication Skills in 4 Weeks' for the subject. In this draft, the company is highlighted as one that helps with practical English training and is workplace focused. He explains the improvement of business communication, the ability to make better presentations, and the ability to help clients create better interactions. The draft ends with an invitation to set up a meeting to discuss possible collaborations. The draft is simple, professional and to the point, and it targets the decision-makers in a company, which is why it is effective.

Target Audience:

The intended audience here is mainly young professionals, ages 20-35, fresh graduates from tertiary institutions, and those in the working class, especially those in offices, as this is where rapid growth is observed. This is also the case for HR departments and the companies themselves, as they are the ones who invest in training for improved results from their employees. They also have a keen interest in English, as it is a key requirement to thrive in high ranking and multi-national work setups (Mainga et al., 2022).

Message used:

The general message communicated through the banners and all the other promotional materials is that being proficient in English leads to one being self-assured, having better opportunities in their career, and a successful professional life. The English Helper is not just a language learning service; it is a vehicle for change. The message mainly targets the

emotionally insecure people about their English skills, but it also demonstrates practical value considering the outcomes (Ahamed, 2025).

Why it works:

This works due to emphasising outcomes. Showing lifelike examples of the real transformations possible grabs attention and strengthens relatability. Messaging that is clear and simple usually maximizes understanding of the value proposition. Incorporating social media ads with an email blast works because it targets individual professionals and company accounts as well. Free assessment sessions lower barriers of entry to first engagement. In this competitive job market, EnglishHelper is able to position themselves as a partner in career development (Rahman, 2024).

In-App Advertising

By analyzing EnglishHelper and its main competitors, we identified multiple opportunities for EnglishHelper to improve its platform without sacrificing the user experience. Through research, we realized there is a substantial opportunity to include ads and make more money, but at the same time, we found that if there are too many ads, it will affect students' learning experience, causing them to become dissatisfied with the application (EnglishHelper, 2026). The solution would be to compromise and balance the two by not including ads in the middle of lessons, and instead, possibly at the end of the lesson or as a way to unlock a new lesson (EnglishHelper, 2026). The ads chosen should also be relevant to the topic of education and skill-building, so they are not completely out of place (EnglishHelper, 2026). The best target advertisers would be brands or companies in education, career, and content, as their consumer base would include students at various levels and corporate training users (EnglishHelper, 2026). The way to do this is to showcase the ad as a banner ad or embed it subtly into the dashboard (EnglishHelper, 2026). We recommend their subscription model, where the first tier is either very affordable (on the cheaper end) or free but with ads embedded throughout (EnglishHelper, 2026). There are three different ways we recommend incorporating ads into their platform (EnglishHelper, 2026). The first way is to reduce the number of ads and space them out so the user does not feel inundated by ads (EnglishHelper, 2026). The second option is through opt-in ads. The third and final way we recommend is giving the user a reward, like unlocking an extra lesson when they finish a whole ad (EnglishHelper, 2026).

Appendix A: Survey Questions

Questions:

1. Select a group.
2. What are the biggest challenges you face when learning English?
3. What tech tools have you used so far to improve your skills?
4. Would you consider using the EnglishHelper app (a private AI assistant for reading and pronunciation)? Why or why not?
5. What aspects of this app do you like the most at first glance?

6. Which features would be most useful to you in everyday use?
7. What additional features or elements would encourage you to use it more often (every day)?
8. How much would you be willing to pay per month for access to this technology if it actually improved your pronunciation?
9. Would you recommend the EnglishHelper app to your friends or coworkers if it helped you overcome the language barrier?

Appendix B: Survey Results

1. Target Audience (Question 1)

Result: 100% Students.

Insight: The strategy should focus on academic needs, exam preparation, and first job interviews.

2. Learning Challenges (Question 2)

Result: 61.5% Lack of confidence & anxiety about speaking

Insight: The marketing message must emphasize "Safe Practice" to reduce anxiety before speaking in public. This justifies our main campaign slogan: "Train with AI without witnesses." It's not just about learning; it's about psychological comfort.

3. Current Toolset (Question 3)

Result: Most respondents use Duolingo or YouTube.

Insight: EnglishHelper can fill the gap between "gamified vocabulary" (Duolingo) and "passive listening" (YouTube) by offering active pronunciation training.

4. Interest in EnglishHelper (Question 4)

Result: Users value the AI Assistant and Privacy.

Insight: The "Privacy" aspect is the strongest selling point for those struggling with the language barrier.

5. Most liked aspects at first glance (Question 5)

Result: 63.6% Learning anywhere/anytime (Mobility)

Insight: Mobility is the top value. Marketing should show the app being used "on the go" (commute, breaks).

6. Everyday Usefulness (Question 6)

Result: 44.4% Choice of texts related to hobbies (SBL)

Insight: Subject-Based Learning (SBL) is the key feature for daily utility. Users want relevance to their passions.

7. Daily Engagement (Question 7)

Result: 58.3% Short 5-minute challenges

Insight: Product development should prioritize "Micro-learning" – quick, manageable tasks for a busy student schedule.

8. Price Sensitivity (Question 8)

Result: 63.6% Willingness to pay: \$8 – \$15 USD / month.

Insight: This price range is the "Sweet Spot" for Polish students, balancing affordability and profitability.

9. Viral Potential (Question 9)

Result: 50% Definitely yes.

Insight: We should implement a Referral Program (e.g., "Invite a friend and get 1 month of Premium").
